

Ahh-Some®

Product Information

Ahh-Some Filter Cleaner

Ahh-Some Filter Cleaner can be used to clean all types of Pool and Hot tub filters. Ahh-Some Filter Cleaner has been formulated to provide a complete and deep-cleaning to rid your filter of contaminants and other bio-particulates that affect circulation and water clarity.

INSTRUCTIONS:

Filter Cartridges or DE Grids: Mix 2 teaspoons of Ahh-Some Filter Cleaner in a 4 or 5-gallon pail of water. Stir the gel so it dissolves. You will see foam. Soak the filter cartridge(s) or grid(s) in the solution for about 30 minutes, longer if real old and very dirty. Keep them submerged in the solution or turn them in the pail so the entire filter gets a soaking. Remove filter(s) from the solution and hose off using a little pressure. That's it! You will find that the thousands of crevices and navigable pores throughout the cartridge(s) or grid(s) are now opened. Your filter pressure should drop and the water flow returning to your pool or spa will be stronger. It is ok to pour the leftover Ahh-Some Pool & Hot Tub Filter Cleaner and water on the ground without causing any problems. There are no acids in the mixture. On extremely dirty cartridges or grids you may have to use a little more gel to do the job thoroughly.

Sand Filters: Ahh-Some Filter Cleaner will clean microscopic particulates and all contaminants that are harboring inside your sand filter. There is no need to change your filter sand to rid it of biologic and organic nasties that can affect filter pressure and water clarity. When you see the gunk we remove from the sand bed, you'll agree Ahh-Some is AWESOME.

Instructions for Sand Filters: Fill a 5 gallon pail with water. Add half the Filter cleaner container (1 ounce). Dissolve by stirring or agitating. Using warmer water will accelerate this step. Ideally, two people are doing this if the power switch is far away. Remove skimmer basket. If you have two or more skimmers, pick any one to pour into. While filter is IN BACKWASH cycle turn on pump. Slowly pour 1/2 of the diluted Ahh-Some Cleaner into the skimmer. When you have poured 1/2 into the skimmer SHUT THE PUMP OFF. Let the cleaner penetrate and saturate into the sand for about 30 minutes. Keep in BACKWASH CYCLE and turn the pump BACK ON. Slowly pour the remaining liquid into the skimmer. Ideally, if you have another skimmer, pour into that one. We'll clean gunk out of that line too. When the pail is empty, keep backwashing for 30 seconds to 1 minute longer. Shut power off. Place selector valve into RINSE mode if available. Power back on for 15 seconds. Shut power OFF. Place skimmer basket back into skimmer. Turn selector back to FILTER and turn pump on. That's it!

Note: For Large Commercial Pool filters we want you to use the entire 2 ounce container for one (1) cleaning. Sand filters in very warm climates NEED this type of cleaning to remove all the microscopic bacterial biologics that may be lurking inside their sand tank. Ahh-Some is absolutely the finest and fastest way to get your Sand Filter back to like new working condition.

Important: You will see some foam. This is normal. It will dissipate in a matter of minutes.. Wipe away any residues and your skimmer housing and basket should be clean as a whistle. Perform this cleaning as periodically or as needed.

- *Ahh-Some Filter Cleaner is available in 2oz (12 tsp). We recommend using eye goggles to prevent any splashing from getting into eyes.*
- *If any does splash into eyes be sure to rinse thoroughly with clean water.*
- *Keep out of Reach of Children.*
